505-323-6300

To all the MOMs out here ~

"M" is for the million things she gave me,
"O" means only that she's growing old,
"T" is for the tears she shed to save me,
"H" is for her heart of purest gold;
"E" is for her eyes, with love-light shining,
"R" means right, and right she'll always be,
Put them all together, they spell
"MOTHER,"
A word that means the world to me.
- Howard Johnson

- 5000 Balloon Fiesta Pkwy., Albuquerque, NM 87113

- 505-768-5366 <http://www.abqwinefestival.com>

- 1) **Check the average humidity in your area.** Evaporative coolers work best with very low relative humidity and hot temperatures. If the average humidity in your area is 40-50%, an evaporative cooler will not work properly.
- 2) **Create a "vent" to direct the cool air through the house.** e.g. During the day open a window in the living room an inch or two and close the bedroom doors to cool the space you're using and cool less space. At night close the living room window and open one in each bedroom that will be used.
- 3) **Wait until it's 85 °F (30 °C) or higher outside.** Believe it or not, swamp coolers operate the best when it's warmer. The evaporation mechanism is most efficient when there is a significant difference between the cooling pads, the water, and the air, and as long as the outdoor relative humidity is less than 30%.

You've heard the phrase, but what exactly IS an emergency? That would be loss of heat in the winter, or cooling in mid summer, or any plumbing issues that cause water to spill into your apartment. What do you do in this type of emergency? If it's during business hours, (Monday through Friday 9 am to 6 pm) call the office. We will write up the work order and get maintenance on it immediately. If it's after business hours, (after 6 pm, or the weekend) then you need to call **715-7012**.
